

**For Immediate Release:**

**Conergy Selected as Key North American Channel Partner for  
Day4 Energy's High Efficiency Modules**

DENVER, Colo., July 5, 2007 – Conergy has reached an agreement to become a key North American channel partner for strategic allocation of Day4's high efficiency solar modules. The agreement guarantees more than 2 MW of modules for calendar year 2007 and considerably more for 2008. Day4 modules are produced with proprietary technology that results in high module efficiency at an economical price. The majority of Day4 solar modules, which are manufactured in Canada, have been allocated to the European market where feed-in tariffs create consumer demand for high efficiency modules.

"Our business strategy has been to carefully select channel partners and build long-term strategic relationships. Conergy's global reach, entrepreneurial spirit and customer-focused business model make them a highly desirable partner to achieve our business goals," said Jake Brown, Vice-President of Marketing and Business Development at Day4 Energy.

Conergy's supply of primarily black-frame 170w, 175w and 180w modules (this denotes the STC rating) is available to authorized installers. Customer feedback about the modules' price and performance relative to competitive brands has been extremely positive.

"The Day4 modules are a good fit in the Conergy photovoltaic portfolio. The black frame and uniformity of the module surface create an aesthetically pleasing module for residential and architecturally sensitive applications. Day4 has achieved some of the highest PTC ratings in the industry which is the basis for incentives in California, the largest solar energy market in North America," said Anthony Fotopolous, Director of Sales for Conergy.

**About Conergy:** Conergy is the world's largest company solely dedicated to renewable energy with operations in more than 23 countries and 20 years of experience in the U.S. Through our network of authorized dealers, Conergy provides solar electric, solar thermal, solar water pumping, and wind power solutions for every energy demand. Conergy delivers expert services including project design assistance, technical support, 24x7 ordering capability, and commercial financing solutions.

**About Day4 Energy:** Day4 Energy Inc. is a manufacturer of photovoltaic modules based on proprietary PV cell and PV module technology developed by the company. Unique features of the Company's products include exceptionally high power density, increased product reliability and uncompromised aesthetic appearance. While the company operates its own PV module manufacturing facilities, PV cell manufacturing is

done in close collaboration with the industry's leading PV cell producers. At this time the company is rapidly expanding its operations and market presence in North America as well as Europe. Day4's R&D team is continuing to push forward with the development of the next generations of PV cell and PV module designs that hold the promise of rapidly reducing the cost of PV power generation in the future.
